

Field inspections of highest quality and traceability of results

Standard-compliant field inspections with Ortelium

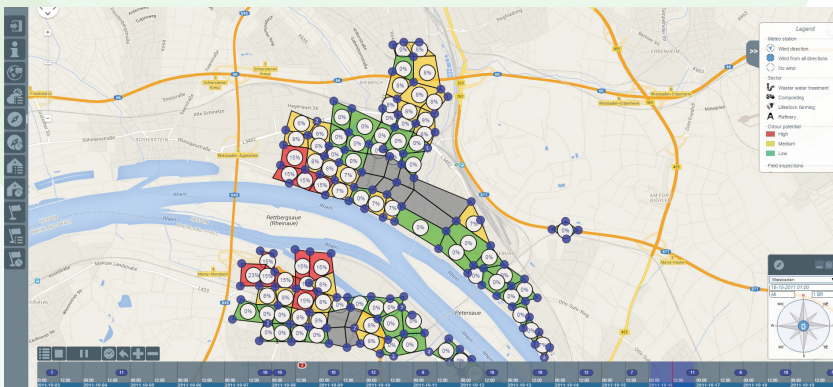

The Ortelium – Field Inspection Manager (OFIM) was developed especially for the needs of laboratories performing field inspection projects.

So you'll be pleased to know that it's fully compliant with the VDI 3940 and prEN 16841-1 guideline and serves as a central platform for your field inspection projects.

The OFIM combines an online web application for management of inspection projects and a user-friendly smartphone application for digital data collection.

This Web 2.0 state-of-the-art technology offers powerful tools that can save valuable time and effort while increasing the quality and traceability of results.

The OFIM provides support from the early planning stages of your project right through to delivery of results to your clients.

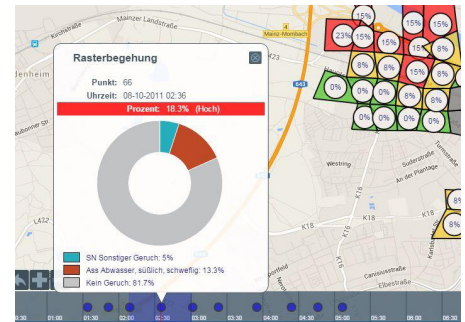

The OFIM is accessible worldwide and even makes it easy for you to manage your inspection projects when you're out and about. It also gives you the option to use the project data to create your reports and to offer your clients direct access to validated results. Periodic reporting of results has never been so easy!

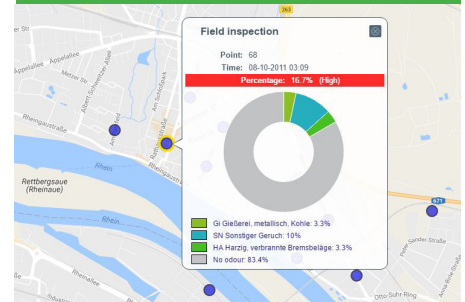

A municipality and the local municipal wastewater treatment plant used Ortelium to identify an odour source by performing field inspection projects and integrating citizens directly into the process.

The council of Kelsterbach and the operator of the potential source – the local municipal wastewater treatment plant (Stadtentwässerung Frankfurt am Main) – received around 130 complaints in six weeks.

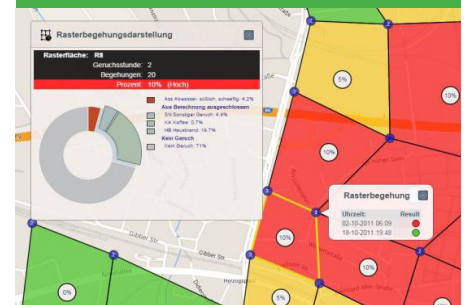

With the Ortelium application, observations of trained sniffers and of citizens living in the affected environment were combined, providing valuable information about location, time, duration, and also the character of the odour perceived. This helped to investigate the odour source and to implement measures to minimise the odour impact risk.

With the OFIM you don't need paper-based protocols. Instead, you can benefit from up-to-date and instantly available inspection results.

GPS location checks and exact time recording inspections make sure that your assessors are at the right location at the right time.

Automated calculation of results eliminates the need for cumbersome and time-consuming manual analysis and transfer of results into other documents – which also means there's less potential for error.

Contact us for a live demo

We understand that your business needs are unique and that off-the-shelf solutions rarely meet individual demands. That's why we offer custom web demos of relevant Ortelium solutions.

These demos provide the basis for a detailed discussion of your needs and expectations. By combining your ideas and our Ortelium platform technology, we can create a dynamic atlas that perfectly suits your business needs.
